

DID YOU KNOW?

News You Need To Know • Looking at the Seven Mountains of Culture • “And the government will be upon His shoulder.” Isaiah 9:6

YOU CAN MAKE A DIFFERENCE BY CASTING YOUR VOTE!

Towns and Districts in Monroe County will be hosting elections on **Tuesday, November 7**. Be an informed voter; look up the candidates so that you know who and *what* you're voting for. Go to monroecounty.gov/elections if you need to register to vote, see a complete list of who's in the race, or learn how you can work during the elections. The deadline to register is October 28. Early voting is October 29 - November 5. Here are the County-Wide races.

STATE SUPREME COURT JUSTICE

Democratic	Margot J Garant
Republican	Alex R Renzi
	Joe Waldorf
Conservative	Alex R Renzi
	Joe Waldorf

FAMILY COURT JUDGE

Democratic	Maria J Cubillos-Reed
	Maroun G Ajaka
Republican	Kristine M Demo-Vazquez
	Dandrea L Ruhlmann
Conservative	Kristine M Demo-Vazquez
	Dandrea L Ruhlmann
Working Families	Maria J Cubillos-Reed
	Maroun G Ajaka

DISTRICT ATTORNEY

Republican	Sandra J Doorley
Conservative	Sandra J Doorley

COUNTY EXECUTIVE

Democratic	Adam J Bello
Republican	Mark W Assini
Conservative	Mark W Assini
Working Families	Adam Bello

DAVID VS. GOLIATH

By Candy Giles

Some have called Attorney Bobbie Anne Cox Princess Lei, Erin Brokovich, and Joan of Arc all rolled into one!! She was told, “Try to relax, the future of humans rests on your shoulders.”

On September 13, 400+ patriots from Buffalo, Albany, Vermont, etc. gathered outside the NYS Appellate courthouse in Rochester to support the oral arguments of Bobbie Anne Cox against Governor Hochul's overreach.⁽¹⁾ Hochul has a regulation that allows the Health Department to isolate or quarantine anyone (against their will), including children, SUSPECTED of being exposed to communicable diseases. The quarantine centers will be of the state's choosing, with no due process, specific guidelines, or time frame. Resistance could result in arrest and a \$2000 a day fine.

There is already a 70-year-old state law that addresses public health concerns and provides due process for anyone posing a health threat. A resistant person would be taken to a hospital for care. Now that makes sense!

Last year after Bobbie Anne made her arguments, a lower court ruled *against* the quarantine regulation. Hochul's administration appealed. So pro bono lawyer, Bobbie Anne, again masterfully presented how unconstitutional, dangerous, and ridiculous the regulation is. The list of diseases that could cause forced isolation includes some non-communicable diseases like Toxic Shock Syndrome! Hochul's lawyer objected to using the words “commitment” or “confinement” (referring to the quarantine camps) but that's exactly what it is!

During the arguments, the hundreds of patriots who couldn't fit in the courtroom watched outside on monitors. At the end, both inside and outside the courtroom, Bobbie Anne received a standing ovation.⁽²⁾ Afterwards, outside, she asked everyone for prayer and support. The decision by the judges could take several months.

Read the regulation⁽³⁾ and how to support her pro bono work.⁽⁴⁾

Bobbie Anne expressed much gratitude. “I'm not exaggerating when I say that it never happens in real life...that hundreds of people show up to hear oral arguments on a case, and then give the attorney a standing ovation...!”⁽⁵⁾⁽⁶⁾

INTRODUCING DEW

By Laurie Ortiz

In recent years we have witnessed several horrifying forest fires across the globe having unusual characteristics. Their origins haven't been specifically identified. These fires seem to have the ability to choose what and how they'll burn while reaching temperatures well above the norm. If "Googled" the answer will be "climate change!"... the planet is getting hotter! However it's reported that in California for example, the average temperature has risen a whopping 1.8°F since 1980!⁽¹⁾ Could something else be at play here?

DEW stands for "Directed Energy Weapons." Many countries, including the U.S., have been experimenting with them for several decades. With the recent uptick in drone warfare, these weapons have come to the forefront. DEW, compared to conventional weapons, is less expensive, more stealthy, and can destroy a target with pinpoint accuracy in 2 - 4 seconds.

There are 3 basic categories of DEW:

High Energy Laser based system - invented in the 1960s, these include chemical, solid state, and free-electron lasers, with solid-state (fiber). Beginning to be used, these are capable of melting steel.

Radiofrequency system - includes high-powered microwaves and millimeter waves (frequencies above 24GHz). Already in use, these can affect multiple targets due to beam size.

Particle beam system - fires atomic and subatomic particles, and can be used outside of the atmosphere.⁽²⁾

The difference in mode of destruction between laser and microwaves is basically that the laser works from the outside in, whereas microwaves work from the inside out. Using a laser, a structure or an area can be targeted, completely demolishing it, while surrounding features remain untouched. Microwaves seek to be absorbed by a conductor such as water or oxygen, thereby burning from within.⁽³⁾ Due to the nature of these weapons, it is conceivable that a fire could be started invisibly, and leave an abnormal path of destruction. This begs the question...could these fires we've seen more recently be intentionally started? Evil knows no boundary!

GUN RIGHTS

By Ken Wolf

Our 2nd Amendment rights are under attack. The government is trying to limit and control what kind of guns the public can have. They do other things too. For instance, "the Biden administration has

revoked a record number of licenses from gun dealerships this fiscal year."⁽¹⁾ Last year, the IRS raided a gun shop, taking gun owner documents which appeared to exceed the search warrant that was issued. These form 4473 includes gun purchaser's name, gender, date of birth, address, location of birth, social security number, and the serial number of each gun purchased at the store.⁽²⁾

In New York, you now need a background check in order to buy ammunition and pay an additional \$2.50 tax on that purchase. That background check will require the purchaser's name, (up to five additional names/aliases), residential address, date of birth, height, weight, race, ethnicity, prior military status, country and place of birth, citizenship, whether and what driver's license or government-issued identification the person has, social security number, contact information, the manufacturer, the 'Ammunition Identification Number', the caliber, and amount of ammunition being purchased.⁽³⁾

Also, besides the background check and an additional \$9.00 tax, you now need a permit for a semi-automatic rifle.⁽⁴⁾

On September 6, in New Mexico, an 11-year-old boy was shot and killed. Three suspected drug dealers are now in custody for that murder. It appears to be a case of mistaken identity. The

THINKING OF BUYING AN ELECTRIC VEHICLE?

Excerpts from online articles compiled by Ken Wolf

Volkswagen has revealed that its e-Golf needs to be driven 77k miles before it outperforms its fuel-powered counterparts in environmental impact. The number tops Volvo's estimate in 2021 that EVs only become "climate-friendly" between 30,000 and 68,400 miles—or what typically amounts to between four to nine years overall.

According to Volvo's figures, EVs are 70% more environmentally harmful than internal combustion engine (ICE) cars, largely due to their batteries. EV batteries require intensive cobalt and lithium mining, which are done in Africa and S. America and cause significant greenhouse gas emissions.

Analyses show that because electric cars require so much electricity, EV owners are likely to pay more per mile than ICE vehicle owners. For a Kia e-Niro, the UK's best-selling affordable electric car, a full recharge can cost about \$69. On a battery offering an average range of 230 miles, this amounts to 29¢ per mile. But for a 400-mile-range Ford Puma, last year's fuel-powered bestseller, \$76 refueling amounts to only 19¢ per mile.

Several U.S. states who pushed for "sustainable" and "environmentally friendly" vehicle alternatives are now imposing additional registration fees on EV owners. Illinois Democrats proposed charging EV owners a \$1,000 annual registration fee to recoup the loss in gasoline taxes. After intense backlash, however, they settled on charging EV owners a \$251 annual registration fee, \$100 more than their ICE counterparts.

In addition to the higher costs, EVs are less equipped for extreme weather, which authorities worry will increase traffic congestion. Winter's cold has been known to affect an electric vehicle's driving range between 20%–41%.⁽¹⁾

60% of the electricity in America is generated by fossil fuel(s).⁽²⁾ So, if you have an EV, you are still generating CO2. These vehicles have at least a 60% chance of being charged by fossil fuels.

OUR FREEDOMS ARE BEING CHALLENGED

By Lee Bradley

In August 2023, Lance Wallnau had an interview with Pastor Artur Pawlowski regarding his arrest for encouraging Canadian truckers to “stay the course” against the COVID shutdown. Artur spent 50 days in jail, in isolation, before he was released. It started with him kicking out the Calgary police when they tried to shut down his Easter service in April 2021. Besides being threatened, they bribed him with \$2 million—even offering him a government position to stop speaking out against the mandates and “tow the company line.”

We in the U.S. have taken our freedoms for granted, trusting that our government is looking out for our best interests. From our federal government not securing our borders and lying about it—to the release of criminals back into society without prosecution. Even Governor Hochul’s regulation to push through quarantine camps without due process. (See David vs Goliath on the front page.) Thank you Bobbie Anne Cox for being in this fight.

We are at a crossroads. As the Ekklesia, The Church, it is our responsibility to engage and participate with our government—to make our voices heard—so that our freedoms are not taken away, or we could tell a tale similar to Pastor Artur.

VACCINES AND COVER-UPS

By Candy Giles

It’s hard to believe that a vaccine meant to help people could cause harm. Perhaps if there had not been a cover-up of the dangers of the polio vaccine in the 1950’s we would not be dealing with another deadly vaccine. Yet both the CDC and pharmaceutical companies are making every effort to hide data about injuries from the COVID-19 vaccine.⁽¹⁾

Jonas Salk developed the polio vaccine in 1954. Before mass vaccinations began, Dr. Bernice Eddy at the National Institute of Health studied samples of the vaccine and found that half contained a live, infectious virus. Her warnings were ignored and led to 40,000 children in California and Idaho becoming ill, 169 became paralyzed, and 10 died.

Albert Sabin developed a supposedly safer vaccine, but Dr. Eddy discovered that it contained the simian virus (SV-40) and reported that “a medical catastrophe of unprecedented proportions could await the generation inoculated by the polio vaccines: an epidemic of soft tissue cancers—lung, breast, lymphoma, etc.”⁽²⁾ Her findings were ignored and she was crushed professionally.

In the book **Dr. Mary’s Monkey** (2007) by Ed Haslam, he shows that Dr. Eddy was right. We are in an epidemic of soft tissue cancers.

(Some would contend that the polio vaccine saved many lives. However, according to the Washington Post (January 1988), all cases in America since 1979 came from the vaccine.)

Haslam also explains that vice-president Nixon approved the vaccine and the cover-up to protect his own and many other careers. When John F. Kennedy defeated Nixon in the 1960 presidential race, Kennedy learned of the secret. Could this cover-up be another nail in JFK’s coffin, that led to his assassination? (A new documentary by Rochester’s Shannon Joy shows the complex web that led to Kennedy’s fateful day.)⁽³⁾

The evil surrounding the polio vaccine changed the course of history, particularly the failure to vet future vaccines. Now history repeats itself with another dangerous vaccine. Renowned toxicologist Dr. Janci Lindsay has testified to the CDC and S.Carolina’s Senate Medical Committee about the contaminants and cancer-causing SV-40 found in the COVID vaccine!⁽⁴⁾⁽⁵⁾

LET’S RE-THINK THIS

By Barbara Sieber

There is a time and place for civil disobedience. That time is now. We are living through Fifth-Generation warfare, a type of warfare that involves non-kinetic military action—such as social engineering, misinformation, cyberattacks, AI, DEWs, and fully autonomous systems.⁽¹⁾ We’ve endured Marxism in schools and government, illegal voting, illegal immigration, wildfires and weather events, and cartel infiltration bringing sex and child trafficking along with fentanyl deaths. We are currently living in a bio-security state - a government apparatus that joins health and state powers and the ability to derail life as we know it.⁽²⁾ Additionally, the World Health Organization is laying the foundation to take control over all aspects of everyone’s lives, across the world, under the auspice of biosecurity.⁽³⁾ Now we are being threatened by our government with a new round of COVID and its accompanying shots, boosters, and masks.

“Experience has shown...that once a threat to health is in place, people are willing to accept limitations on their freedom that they would never theretofore have considered enduring...”⁽²⁾ While much is out of our control, shots, boosters, and masks clearly are in our control. Re-think what you’ve been told. The shots are proven to be infective, sometimes deadly, with possible long-term health effects, causing more infection among the boosted than non-boosted.⁽⁴⁾⁽⁵⁾⁽⁶⁾ These governmental pushes are a warm-up to the 2024 elections. COVID was the excuse to push mail-in voting, which is easily open to malicious manipulation to benefit the prevailing ruling party. Masks don’t work. Even the much-ballyhooed N95 has been found to not work.⁽⁷⁾ You are breathing in your carbon dioxide throughout the day. If you are sick, you are breathing and rebreathing in your own toxins, which has been linked to chronic headaches, organ damage, and cancer.⁽⁸⁾

Think again if and/or when confronted with public and governmental intimidation, especially if you are not buying their storyline. Many pastors have already decided they will not close their churches again. Pastor Che Ahn of California challenged the government to the Supreme Court and won.⁽⁹⁾ Be prepared to pick your battle.

GUN RIGHTS *(cont' from pg. 2)*

men intended to target their rivals. Two days after the shooting, New Mexico Governor Michelle Lujan Grisham tried to temporarily suspend the open-carry and concealed-carry laws in Bernalillo County. It was part of a 30-day **public health order** aimed at reducing gun violence.⁽⁵⁾

So, now executive orders are being tried to subdue gun rights.

Illegal drugs are killing more people than guns (what are we doing about THAT?).

In my opinion; Legal gun owners are not the problem. Criminals don't respond to EOs. And "gun-free" zones only allow mentally disturbed people to prey upon people who are essentially "sitting ducks."

HAPPY BIRTHDAY ROCHESTER!

By Laurie Ortiz

2034! That will be the 200th birthday of Rochester, NY. Plans drawn up in 2012 are set for completion for our bicentennial celebration.

"Rochester 2034" was made official in November of 2019, and is in full swing.⁽¹⁾ The comprehensive plan focuses on every conceivable aspect of our community: housing, transportation, health, economy, schools, art, and more. The East End inner loop fill, with street reconfiguration, bicycle boulevard, and mixed-use housing construction on Union Street is a completed portion of the plan.

Traversing through various city neighborhoods, you may have noticed community gardens popping up on vacant properties—also part of the plan. With the Rochester Community Sports Complex completed in September 2021, the Roc the Riverway Initiative is underway. This includes upgrades to the Blue Cross Arena, its street and riverside areas, rehabbing the Running Track rail bridge, and development of the Roc City Skatepark to name a few.⁽²⁾

While these projects are wonderful in their scope, some changes could potentially have a negative impact. For example, reducing St Paul Blvd from four to two lanes, adding bicycle lanes, and filling in the East End inner loop, doubled my commute time to work. The inner loop's north corridor is next to go. Studies were conducted showing a mere 8,000 vehicles/day travel this portion, therefore it's underused and unneeded.⁽³⁾ To see proposed concepts for this re-do go online to innerloopnorth.com/concepts. Other changes include the implementation of new zoning codes requiring pedestrian-oriented designs to reduce automobile usage and parking needs while requiring more bicycle parking and public transit; regulations requiring solar and wind energy installation; and conversion from gas/oil use to electricity for commercial and residential properties. Reducing single-family homes will make way for more multiple-family dwellings.⁽⁴⁾⁽⁵⁾ Time will tell if this Birthday present was a good pick!
